

Marachrome MC Mirror Silver

Solvent-based Screen Printing Ink for Impressive Mirror, Chrome, and Metallic Effects

Screen
2011
10th Aug

Formerly, creating mirror effects was only possible by using expensive processes like the silvering of glass or the application of hot stamping foils. Marachrome MC 295 Screen Printing Mirror Ink enables you to simply print this effect.

Applications

Marachrome MC Mirror Silver is predestined for the making of high-quality indoor sales, advertising, and exhibition displays. It shows furthermore outstanding suitability for the decoration of float glass or casings for electronic equipment (e.g. mobile phones).

Possible substrates are: Transparent materials including PMMA, polycarbonate, PETG, PETA, and glass, as well as foils made of polycarbonate and coated polyester.

Attention: The mirror effect is only possible by printing **onto the reverse side** of a transparent substrate!

Features

Special features of Marachrome MC Mirror Silver are not only good opacity and screen opening, but also its mild odour and the press-ready formulation.

Protective layer

For higher chemical and mechanical resistance, we recommend to overprint a protective layer.

Gold, Bronze, Metallic Shades

Attractive Bronze or coloured metallic effects can be created by pre-printing the front or back with transparent Marabu inks like Marastar SR or Glass Ink GL. Another eye-catching effect can be achieved with "Mirror Gold", which is available upon request.

For further details, please see the Technical Data Sheet „Marachrome MC“ and the TechINFO „Marabu Screen and Pad Printing Effects“ on www.marabu-inks.com.

Marachrome MC 295 Mirror Silver:
Available in 500 g units,
Art.-No. 3245 57 295
