

Changed Pigmentation starting with Batch 322

Due to a discontinued raw material, the colour shade 924 of our EuPIA GMP compliant ink series Ultra Pack UVFP has been re-formulated with a new pigment.

Colour Deviation

Compared to the original formula, the deviation of the dE-value on white substrates is 3.4 at full colour, and thus beyond the existing tolerance. This deviation was unavoidable since the range of raw materials suited for low migration requirements is rather limited.

Technical properties such as printability and flow are not affected by the pigment exchange.

Nevertheless, please check to what extent this change may have an effect on your specific application and, if necessary, carry out appropriate testing.

Custom Inks

Repeat orders of affected custom inks may be delivered with a slight delay as the formulations have to be revised.

For further information on Ultra Pack UVFP please refer to the Technical Data Sheet on www.marabu-inks.com

Colour Management

A new ink file for the Marabu ColorFormulator MCF as well as new formulations in the Marabu ColorManager MCM will be available soon.

Date of change-over

This change becomes effective starting with **batch 322** (immediately). You will find an additional remark on the label stating:

„Attention: Modified Pigmentation“
