

Well Combined with UV Letterpress and UV Offset

Whether as eye-catcher, advertisement, or source of information in times of heavy competition and consumption, labels gain more and more in importance. There is almost no industrial segment without the need for decoration, inscription, or designation.

The UV-curable ink series Ultra RotaScreen UVRS has especially been developed for all common rotary label printing machines with stencils from Gallus (Screeny®) and StorkScreens (Rotamesh®), and is especially suited for combination printing with UV letterpress and UV offset.

Applications

Up-market 'no-label-look' use, with high mechanical and chemical resistances according to individual customer requirements.

The substrate range includes common label materials such as:

- Coated or Corona-pre-treated PE/PP foils
- Coated PET foils
- PVC and paper self-adhesive foils

Your Benefits:

Very good compatibility with UV letterpress and UV offset printing

- High process safety thanks to perfect acceptance of the overprinted ink

High reactivity, fast curing properties

- High printing speeds for increased output and efficiency

Flexible ink film

- Very well suited for post-processing steps such as stamping and die-cutting

Best possible rheologic adjustment, press-ready

- Perfect flow and printing characteristics, convenient use

Brilliant, glossy colour shades

Universal use

- High mechanical, chemical, and fill good resistance, outstanding adhesion on common substrates
